SCHEME

This scheme is a planned and comprehensive solution to a hitherto insoluble problem. The three sections of the scheme are:

I. ASSESSMENT OF MAGNIFICATION – A Quantitative Method.

The new KEELER "A" Series Test-Type notation, laying special emphasis on the region beyond 6/36 provides a uniform progression of type sizes. Thus, for the first time, the patient's reading acuity can be accurately determined, and – more important still – the precise magnification needed to raise the acuity to any desired or practicable level can be read off from a specially-devised table.

2. PRACTICAL VERIFICATION.

Because magnification can now be predicted without recourse to a magnifier, it follows that verification of the finding becomes a distinct and valuable procedure. The Verification Set LVA 1-1 shown here provides magnifiers from $2\times$ to $8\times$ all interchangeable in a trial frame, plus illuminated compound aspheric magnifiers to extend the range from $8\times$ to $20\times$.

3. DISPENSING.

A comprehensive set LVA 3-1 enables a wide variety of patient's aids to be made up easily from interchangeable, standardised components. Any desired type of appliance, incorporating the magnification prescribed by the oculist, may be assembled for "on-the-spot" trial by the patient, before finally ordering.

Examples of such appliances are illustrated on facing page.

C. DAVIS KEELER LTD.

or helping the partially sighted

CRESCENT MAGNIFIER
2, 3, 4, 5 or 6x

Provides distance vision while maintaining full width of field for reading.

TELESCOPIC SPECTACLE
1.75 or 2.5x

A monocular or binocular unit for distance vision. The decentred telescopes ensure adequate lower peripheral field.

SPECTACLE MAGNIFIER 6x or 8x

Reading matter is kept in constant near focus by locating it against the transparent plastic distance-piece.

Displayed components, below show how an R_x lens may be mounted behind the aspheric magnifier.

Patent applied for

THE TEMPLE GRIP TRIAL FRAME

Designed to fit all faces.

Allows for asymmetrical eyes.

Only one screw adjustment to each eye.

THE TEMPLE GRIP FRAME

A Spectacle that does not rest on the nose, yet retains the appearance of a normal frame.

Especially useful in cases of patients who cannot tolerate any pressure on the bridge of the nose.

ACCESSORIES FOR USE WITH THE SLIT-LAMP

CORNEAL PACHOMETER

FOR DETERMINATION OF CORNEAL THICKNESS

DESIGNED AND CALIBRATED IN THE LABORATORIES OF THE INSTITUTE OF OPHTHALMOLOGY.

A DEVELOPMENT OF THE INSTRUMENT DESCRIBED BY MAURICE AND GIARDINI (*BRIT. J. OPHTH.* 1951, 35, 169—177).

THE SLIT BEAM IS DIVIDED INTO TWO RELATIVELY MOBILE PARTS BY A ROTATABLE PERSPEX BLOCK. THE TWO SECTIONS OF THE CORNEAL IMAGE ARE MOVED UNTIL THE ENDOTHELIUM OF ONE COINCIDES WITH THE EPITHELIUM OF THE OTHER WHICH REMAINING STATIONARY IS COLOURED BLUE BY THE INCORPORATION OF A THIN FILTER. LOW LIGHT INTENSITY RESTRICTS THE BLUE REFLEX TO THE EPITHELIUM.

THIS INSTRUMENT IS PRODUCED ON BEHALF OF STERCKS MARTIN LTD. BY A WELL-KNOWN BRITISH MANUFACTURER.

PRICE £18 18s.

SECOND OBSERVER EYEPIECE

MANUFACTURED BY REICHERT, THE AUSTRIAN INSTRUMENT FIRM, THIS EYEPIECE IS LISTED BY HAAG-STREIT FOR USE WITH THE GOLDMANN SLIT-LAMP.

PRICE £28 7s.

GONIOSCOPY CONTACT LENS

BY GOLDMANN

AVAILABLE WITH WIDE OR MINIMAL SCLERAL FLANGE (THE INSTRUMENT IS FULLY DESCRIBED IN DR GOLDMANN'S BOOK "TWO LECTURES ON BIOMICROCOPY OF THE EYE" FROM STOCK £1 11s. 6d. OR £1 1 POSTAGE INCLUDED).

PRICE £10 10s.

ANTERIOR CHAMBER IMPLANTS

We are manufacturing acrylic implants for the anterior chamber.

Our process makes it possible for wide variations in design to be provided.

We have had the advantage of discussion with eminent authorities on this subject, and patterns already manufactured are based upon their recommendations.

We shall be very pleased to send you full details, including those of a complete sterilisation service.

HAMBLIN PORTABLE EYE MAGNET

Hitherto, high power in a magnet has been possible only at the expense of mobility. This highly-efficient electro-magnet, though small in dimensions and light in weight, is capable of exerting a tractive force comparable with well-known giant types. Its shape and balance make possible a very precise approach to the foreign body and enable the operator to make the maximum use of the very high power developed.

The length (without applicator) is $5\frac{1}{2}$ inches, the maximum diameter 4 inches and the weight 6 lbs; the loading is 500 watts.

With such a loading in a magnet of these dimensions, considerable heat is generated. This is reduced to a minimum by the employment of a fin radiator.

Operating-theatre regulations require flame-proof switchgear to be used with this type of apparatus.

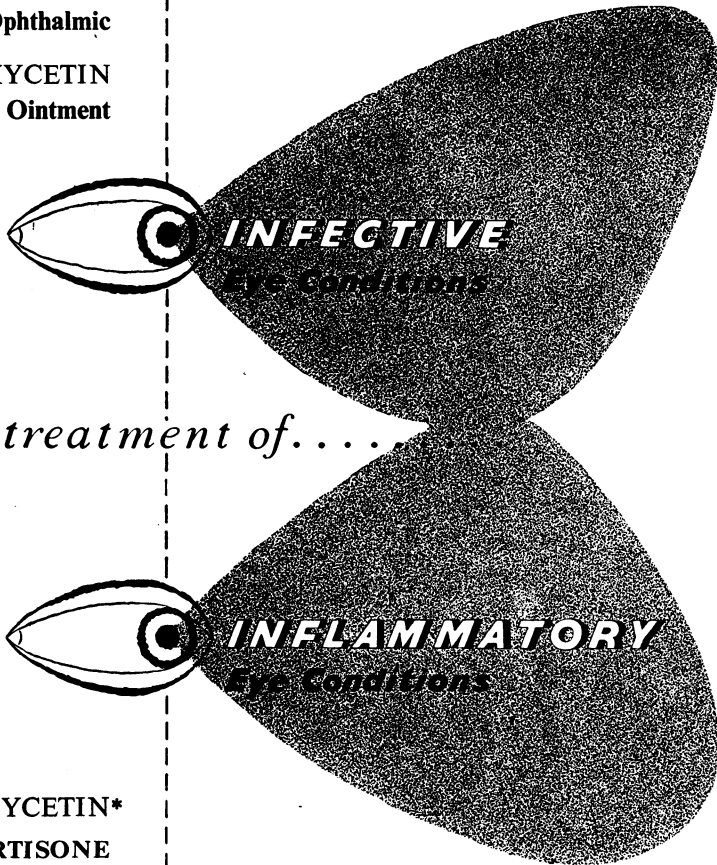

Where Alternating Current only is available, a rectifier is necessary. This can be supplied with suitable footswitch.

For Direct Current a control board with footswitch is also available.

HAMBLIN PURVIS STREAK RETINOSCOPE

The Purvis Streak Retinoscope made by Hamblin is of special value because it produces a reflex less confusing than that from a round spot of light, and because it enables the axis of astigmatism to be located with accuracy.

The strength of the light is controlled by a reostat incorporated in the switch.

The width of the beam or streak of light is controlled by the sliding sleeve. The sleeve is pushed up to make the beam convergent and down to make it divergent. The divergent beam corresponds to the use of a plane mirror, and the convergent beam to a concave mirror.

For plane mirror Retinoscopy, it is only necessary to move the sleeve downwards, past the point at which the light is in sharp focus at one metre, until the beam is from $\frac{1}{4}$ to $\frac{1}{2}$ inch in width.

Alterations in the axis of the streak are governed by rotating the lower sleeve around the stem of the instrument by a lateral rolling movement of the forefinger.

ATLAS OF EYE SURGERY

*R. Townley Paton, MD, FACS and Herbert M. Katzin, MD, FACS
Illustrated by Daisy Stillwell*

Designed for resident surgeons in departments of ophthalmology or for the general surgeon who occasionally has to perform eye operations, the approach in this new atlas is almost entirely visual. All the 464 fine and detailed drawings of surgical procedure are drawn from the point of view of the surgeon and clearly indicate intended procedures. The text is brief, and merely serves to summarize information which cannot be illustrated.

AN
O. P. L.
INSTRUMENT

The Retinal Camera

for photography of the eye in black-and-white or colour

Product of the distinguished French Company, O.P.L., this superb Retinal Camera is now obtainable from Clement Clarke. It is impossible to give full details of the instrument here, but the following is a summary of its benefits.

It is suitable for use on 110 to 250 volts without special installation ★
Fitted with an interchangeable electrical unit ★ Ease of focusing during the examination due to the two reduction levers, without reversing the movement ★ Easy focusing during the examination with constant observation of the patient due to the higher position of the operator and the good side clearance ★ Reliability and complete synchronisation of the photographic mechanism ★ Advantages due to the use of flash and 35 mm film ★ Correction of all spherical and astigmatic ametropy ★

A comprehensive booklet on the O. P. L. Retinal Camera will be sent on request

"A work which will be found to be indispensable to all practising ophthalmologists and sheds lustre on British ophthalmology."—BRITISH JOURNAL OF OPHTHALMOLOGY.

"A beautiful book, well written, exquisitely illustrated. This book is a classic. A copy should be owned by every ophthalmologist. Though primarily for a reference, it makes exceedingly interesting reading from cover to cover."—AMERICAN JOURNAL OF OPHTHALMOLOGY.

PHILADELPHIA - J. B. LIPPINCOTT COMPANY

MAN in the EVENING

Our model is not wearing spectacles. If it were necessary he would undoubtedly be attracted by a Spiller's frame made to suit his appearance, his purse and his pursuits. Such a frame might be the Spiller Demi-Blonde Tortoiseshell Library. This is the frame for the connoisseur. Handmade in our London workshops, and fitted with real gold joints, it gives that touch of quality worthy of all special occasions.

The Spiller Demi-Blonde Tortoiseshell Library Frame
