BY APPOINTMENT OPTICIANS TO HER LATE MAJESTY QUEEN MARY

DIXEY

Illuminated Binocular Microscope for Gonioscopy

This instrument, made of light-weight alloy, was devised in conjunction with Dr. W. J. Wellwood Ferguson of Sheffield.

A 12 watt bulb is contained in the handle and the light is projected between the objectives. A rotating disc gives different sizes of slit and circular apertures. Magnification X10.

Price, complete with transformer, £80.

Gonioscopy lenses, for use with above, available in 3 sizes, £3.10.0 each.

SITUATION WANTED
by a perfect servant,
always at hand, never in the way

**The
 Rodenstock
 'Combi'
 Instrument
 Column**

A self-contained unit that can stand by the side of any type of patient's chair and present to the practitioner trial case, refractometer, vertometer, ophthalmometer, hand ophthalmoscope, luminous retinoscope, or any other equipment he chooses to fit to its smoothly swivelling arms. Internally wired, with bearing contacts obviating trailing wires. Fingertip control of movement, yet the instruments can be instantly locked at the desired working position and height. Superb craftsmanship, finished in chromium and white enamel.

This is but one of the many new pieces of consulting-room equipment that may be inspected in our showrooms. Call or write for further particulars.

Patent applied for

THE TEMPLE GRIP TRIAL FRAME

Designed to fit all faces.

Allows for asymmetrical eyes.

Only one screw adjustment to each eye.

THE TEMPLE GRIP FRAME

A Spectacle that does not rest on the nose, yet retains the appearance of a normal frame.

Especially useful in cases of patients who cannot tolerate any pressure on the bridge of the nose.

A new concept of eyewear comfort

*

Weighing less than half-an-ounce, these new spectacles will have an irresistible appeal among those who demand lightweight eyewear. In perspex or tortoiseshell with Igard plastic lenses, they are a fine example of modern styling allied to traditional craftsmanship.

SHAPLAND VITREOUS IMPLANT NEEDLE *

The needle, of 18 gauge stainless steel, has an annular 'stop' 12 mm. from the point to ensure correct depth of penetration. A cutting edge on the point facilitates insertion. Pre-placed sutures are tied underneath stop as needle is withdrawn to guard against leakage. Available in Record or Luer fitting, this needle may also be used for vitreous aspiration.

SHAPLAND AIR INJECTION NEEDLE *

This new needle, 26 gauge, is also fitted with a stop for safety and maintenance of correct depth of insertion. It fits both Record and Luer syringes.

* Shapland, C. Dee. *Trans. Ophth. Soc. U.K.* LXXVII, 69.
("Intravitreal Vitreous in Retinal Detachment Surgery").

PHILPS-FISON ELECTRODE SET

This compact set provides the ophthalmic surgeon with a neat and comprehensive array of electrodes. These are mounted in rotating cylinders set in a stainless steel container. The entire outfit may be sterilised by hot air, spirit or formalin. Then, by rotation of the cylinders the electrodes are swung upwards for easy and rapid selection (see illustration).

The standard selection of Diathermy needles, Catholysis needles, surface applicators and cautery burners can be modified to meet individual requirements.

OPHTHALMIC SOLUTION WITH NEOMYCIN

(Prednisolone 21-phosphate with neomycin)

'Codelsol' Ophthalmic Solution contains the highly potent steroid, prednisolone, in its most active form for the treatment of inflammatory eye diseases. The addition of the antibiotic, neomycin, assures protection against the wide variety of organisms which may be found in the eye.

'Codelsol' Ophthalmic Solution is completely free from solid particles and is clear, stable, and entirely non-irritating.

How supplied: 2.5 ml. sterile vials. Please specify OPTHALMIC SOLUTION when prescribing this preparation.

MERCK SHARP & DOHME LIMITED, HODDESDON, HERTS.

The Hamblin "510" Ophthalmoscope

is an economically priced instrument developed especially for those who, needing an efficient ophthalmoscope, find the Hamblin Lister-Morton over-specialized. Robust, compact and easy to maintain, it is ideal for Students, most Hospital Departments and the majority of General Physicians and Surgeons.

A simple but highly efficient lighting system provides virtually shadowless illumination of a wide area of fundus. Examination of the macula is facilitated by reducing this area with a stop, quickly placed in position by rotating a milled wheel. This, which is within easy reach on the projector tube, also controls other built-in accessories: green filter, slit and full aperture.

The mirror is hooded, for protection from accidental knocks and dust. The battery handle, with its rheostat, broadly follows the familiar Hamblin lines. The numbers of the Loring-type lens wheel are illuminated.

NEW

the most soluble prednisteroid for the most efficient topical therapy

PREDSOL, prednisolone phosphate, was developed in this country by Glaxo. It is a stable form of prednisolone very much more soluble than the corticoids in common use.

PREDSOL is two thousand times more soluble than hydrocortisone, or prednisolone itself. Because it is so soluble, Predsol achieves the most rapid and the most thorough contact with affected tissues after topical application, so producing maximum therapeutic effect.

ocular conditions
with*

Terra-Cortril*

brand of oxytetracycline hydrochloride and hydrocortisone

Terra-Cortril ophthalmic suspension is of outstanding value in two groups of eye conditions: where an inflammatory process is complicated by infection or the risk of infection, and where treatment of infection is hindered by the presence of excessive inflammation.

Control of Inflammation

The hydrocortisone in Terra-Cortril Ophthalmic Suspension quickly reduces inflammation, relieving symptoms and reducing the risk of permanent damage from scarring.

Control of Infection

Terra-Cortril Ophthalmic Suspension also contains Terramycin.* This potent and unusually well tolerated antibiotic rapidly controls infection, and will prevent the emergence of infection during treatment of a simple inflammatory reaction.

In each ml. of controlled-viscosity gel-like base Terra-Cortril Ophthalmic Suspension contains 15 mg. hydrocortisone acetate 5 mg. oxytetracycline hydrochloride and 10,000 units Spolymyxin B. Sulphate. The suspension is available in 10 ml. amber bottles. An eye-dropper is provided.

HEARING SPECTACLES

Truly accurate dispensing can now be achieved in this field. Hamblin Hearing Spectacles overcome the difficulties often experienced with such devices by a design which dissociates the acoustic and optical aspects of the problem.

A miniature transistor hearing aid produced by specialist manufacturers is incorporated in a Hamblin hand-made spectacle frame. Thus, the requirements of both ophthalmologist and aurist may be independently met.

THE MAJOR SYNOPTOPHORE

THE UNIVERSAL MODEL (Illustrated)

The complete and most up-to-date apparatus for the diagnosis and treatment of squint and heterophoria. The illustration shows the instrument fitted with the After Image Test and Automatic Flashing Unit, used in cases of abnormal retinal correspondence.

THE STANDARD MODEL

This is basically the same instrument as the Universal Model, except that no After Image Test or Flashing Unit can be attached. This popular instrument costs less than the Universal because the wiring for these tests is omitted.

THE SIMPLIFIED MODEL

The cheapest of the three models and the natural successor to the Moorfields Synoptophore, still to be found in so many clinics. It retains all the modern improvements of the other two models, except that the elevation and depression device has not been included. A greater range of hyperphoria movement than that of the Moorfields Synoptophore has been fitted, however.

Please write for illustrated leaflet on these 3 instruments

GOLDMANN APLANATION TONOMETER

The Goldman Aplanation Tonometer represents the greatest advance yet made in instruments designed for the measurement of intra-ocular pressure. The advantages of the Goldman Aplanation Tonometer may be summarised as follows:

1. Extreme accuracy of measurement.
2. Direct reading in mm. of hg.
3. Rigidity of the eye does not affect the measurements.
4. Repeated measurements produce no massage effect and result in no reduction of intra-ocular pressure.
5. Tonometry can become a routine examination with the slit lamp.
6. The patient remains seated during the examination.

A demonstration of the apparatus will gladly be given in our showroom, or in your own consulting room if this can be arranged.

Please write for further details.

EYES RIGHT . . .

An eye ointment with a rapid and intense anti-bacterial action, 'Brolene' is indicated for use, either alone or in conjunction with Propamidine Ophthalmic Solution, in blepharitis, acute and chronic conjunctivitis and corneal ulceration caused by a variety of organisms, and for the prevention and treatment of infection in superficial traumatic eye lesions. It is active against many staphylococci resistant to penicillin and other antibiotics, and its use is much less prone than that of these agents to promote the emergence of resistant strains of organisms. 'Brolene' is active in the presence of blood, pus, and lachrymal secretion, is well-tolerated, readily absorbed on mucous surfaces and unlikely to cause sensitization reactions.

Presentation:
 'BROLENE' IS SUPPLIED IN
 5 GRAMME TUBES.
 Further information is avail-
 able on request.

LADY SHOPPING

Our model is not wearing spectacles. If it were necessary she would undoubtedly be attracted by a Spiller model made to suit her features, her dress style and her purse. Such a frame might be the Spiller "Venus" in which an ultra-modern trend is combined with the old-fashioned virtues of beauty of form and craftsmanship. This is a two-tone nitrate frame and several colour combinations are available.

The Spiller "Venus"
