Introducing the **NEW** **DIXEY ERISIPHAKE PUMP**

This unit has been specially developed to give consistent and reliable operation for long periods with the minimum of attention.

It incorporates a hardened and ground stainless precision gear pump and a unique oiling system which ensures that the pump is always working under optimum conditions.

It is supplied complete in carrying case with footswitch, Barraquer Cannula-handle and rubber tubing and is suitable for operation on AC or DC mains.

We shall be pleased to supply further details on request.

OPHTHALMIC DIATHERMY

Hamblin "OPHTHERM"

*a choice of two models
with output of identical frequency*

**Valve or
Spark Gap**

Simple, safe and dependable, the Hamblin OPTHHERM is a diathermy designed especially for ophthalmic surgery. Proved extremely stable and efficient, it has an output adequate for every type of patient and every degree of tissue resistance. Output, shown on a milliammeter, is controlled by either hand- or foot-switch. A graduated scale enables any setting to be repeated with exactitude; a tick at one-second intervals facilitates the timing of treatment. The OPTHHERM is compact and easily portable, and its robust case completely protects the circuitry.

THE **FISON** BINOCULAR INDIRECT
OPHTHALMOSCOPE

for

**DETACHMENT
SURGERY**

DIAGNOSIS

and

TEACHING

A **Reflecting Plate 1205E** (inset above) enables two observers to view a fundus at the same time. The Plate transmits about 50% of the light incident on it from the patient's fundus and reflects 50% towards the second observer.

This accessory is excellent for teaching fundus appearances to students. Being portable, the Fison Ophthalmoscope with Reflecting Plate entirely supersedes other demonstrating ophthalmoscopes since it may be carried round wards and clinics.

Hamblin Cabinet Test Type

.....

No. 804

Reflections from the glass front are eliminated in the redesigned Hamblin Cabinet Test Type. The lighting is now housed internally; it provides the types with good, even illumination. A selection of up to eight Hamblin distance types is mounted on rollers for remote control by cord. Maddox 'Spot' and Duochrome Test are incorporated.

Types with reversed lettering can be fitted for use with a mirror at three metres.

Zonulysin in cataract

Zonulysin is a highly purified, sterile freeze-dried Alpha-Chymotrypsin, which is particularly indicated for resolving the ciliary zonule.

Maw's Zonulysin is presented in a convenient form for this purpose, allowing easy preparation of a fresh solution for each procedure.

Zonulysin instilled to flood anterior and bathe suspensory ligament.

Suspensory ligament resolved giving easy withdrawal of crystalline lens.

Supplied in boxes of 6 ampoules, each containing 0.2 mgm. Alpha-Chymotrypsin together with 6 ampoules each containing 1.0 ml. of Saline diluent.

The Essentials of Perimetry

HOWARD REED

Department of Ophthalmology, Faculty of Medicine, University of Manitoba

Based on the courses of lectures given at the Royal Eye Hospital to postgraduate students preparing for the Diploma in Ophthalmology, this book provides a concise introduction to the principles of perimetry which should be greatly welcomed by them as the existing monographs on perimetry are far too large for their requirements and the accounts in the standard textbooks of ophthalmology are inadequate. The text stresses throughout the basic principles of perimetry and gives particular attention to those clinical conditions in which routine perimetry is a help in diagnosis and treatment.

The Art of Clinical Refraction

T. H. WHITTINGTON

Ophthalmic Physician, The Royal Eye Hospital

This book is entirely practical in outlook and throughout the text the author gives the methods that he has found, by personal trial over many years, give the best results. As a basic knowledge of optics is essential for a clear understanding of the subject, and for the proper use of diagnostic equipment, the general principles are covered fully in the early chapters. All formulae and complicated mathematics have however been excluded since it is the art rather than the science of clinical refraction that the author wishes to emphasise; above all, the art of making the patient comfortable.

91 illustrations

30s. net

Antibiotics and Sulphonamides in Ophthalmology

ARNOLD SORSBY

Research Professor in Ophthalmology, Royal College of Surgeons and Royal Eye Hospital, and Senior Surgeon, Royal Eye Hospital

JOSEPH UNGAR

Head of Biological Research Department, Glaxo Laboratories

The aim of this book is to provide, in small compass, a complete and up-to-date guide to present-day practice in the treatment of ocular infections. Much of the information is based on research work undertaken personally by the authors and they give a clear and detailed account of the organisms encountered in ocular infections and of the antibiotics to which each organism is sensitive; of the concentration of these antibiotics required in order to overcome the invading organism; of the concentration of each of these antibiotics that can be obtained within the eye; and of the route of the administration required to obtain the necessary concentration.

The specific treatment of all the different clinical forms of ocular infection are discussed in detail, together with the hazards and complications of antibiotic treatment and practical accounts of the techniques required in treatment have been included and should be invaluable in emergency to those with no specialized knowledge.

The New Synoptophore

CLEMENT CLARKE LTD.

*INSTRUMENT DIVISION,
63 WIGMORE STREET, LONDON, W.1*

The New

CLEMENT CLARKE

SYNOPTOPHORE

This completely new Synoptophore which was introduced at the 1st European Congress of Ophthalmology at Athens in April, enables the orthoptist to apply the latest "pleoptic" techniques.

Among the important features incorporated are: *Haidinger's Brush Device* to produce the entoptic phenomenon so important in the treatment of abnormal retinal correspondence, an *improved After-Image Test* producing a better and longer-lasting effect, and a *Built-in Automatic Flashing Unit*.

All the controls are positioned together – a further improvement which will commend this new Synoptophore to the orthoptist.

A NEW TRIAL CASE

S.A.2.B.

This new Trial Case is smaller than our well-known Major range of Trial Cases, but is ideally suited for consulting room or travelling.

The lenses are standard 38 mm. with a lens aperture of 20 mm. diameter surfaced Plano convex or concave to give the maximum degree of correction during testing. The rims are made from solid aluminium and anodised Black for concave lenses and either Satin Silver or Red for convex powers.

The well-made panelled case can be supplied in Oak or Mahogany and has a lift-off lid, fixed tray and a large space for Trial Frames, Cross Cylinders, etc. Outside measurements 20" × 12" × 2½" approx. Price . . . £43 10s. 0d.
