

**Supplementary Table 5 Comparison of number of intraocular pressure lowering medications, visual field mean deviation, average RNFL thickness and corneal endothelial cell count at 12 months between SLT and PSLT**

	PSLT	SLT	P
<b>Number of IOP-lowering medication</b>	0.4±0.6	0.3±0.6	0.820
<b>Visual field MD (dB)</b>	-4.6±3.9	-5.1±4.4	0.487
<b>Average RNFL thickness (µm)</b>	75.9±12.4	79.2 ±11.8	0.125
<b>Corneal endothelial cell count</b>	2668 ±573	2587 ±428	0.370
<b>LogMAR Visual acuity</b>	0.06 ± 0.09	0.06 ± 0.10	0.907

PSLT: pattern scanning laser trabeculoplasty; SLT: selective laser trabeculoplasty; GAT: Goldmann applanation tonometry; IOP: intraocular pressure; MD: mean deviation
