

THE LISTER-MORTON OPHTHALMOSCOPE

The Lister-Morton Electric Ophthalmoscope has now become a standard among luminous Ophthalmoscopes. The view of the fundus oculi obtained by this instrument is incomparably superior in point of diminished corneal reflex and absence of glare. It has a large field brilliantly and evenly illuminated with no trace of filament image or other irregularities together with freedom from reflections from the sight hole. It is made in two forms (1) the Ward model with battery in handle (as illustrated) and (2) the consulting room model for use with current from the mains.

Prices:—

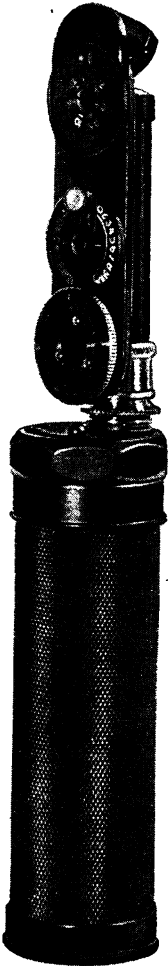

Ward model, complete with case
£15 2s. 0d.
