

PROPAMIDINE

OPHTHALMIC SOLUTION—M&B

Following investigation of the antibacterial properties of the aromatic diamidines, prepared in the research laboratories of May & Baker Ltd., it was found that Propamidine was active on sulphonamide insusceptible and resistant strains of β -haemolytic streptococci and staphylococci. In addition, the presence of pus does not exert, as with the sulphonamides, an inhibitory effect on its anti-bacterial activity.

A short course of Propamidine Ophthalmic Solution—M&B has proved valuable in cases of Morax-Axenfeld conjunctivitis which had resisted for months other forms of therapy and good results may be expected from its employment in other forms of conjunctivitis.

PROPAMIDINE OPHTHALMIC SOLUTION—M&B

is supplied in dropper bottles of $\frac{1}{2}$ oz.
