

THREE NOTABLE HAMBLIN INSTRUMENTS

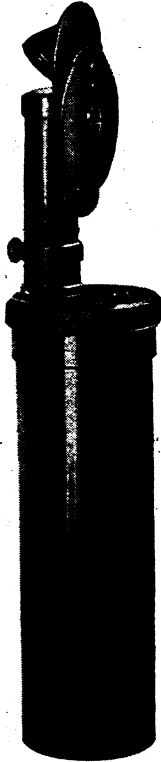

The three illustrations depict instruments that have earned for themselves world-wide reputations as instruments of precision. The first is the well-known LISTER-MORTON OPHTHALMOSCOPE which by reason of its unique lighting system has become the standard ophthalmoscope used by Ophthalmic Surgeons all over the world.

The LISTER-LORING OPHTHALMOSCOPE next shown is the ideal general purpose ophthalmoscope. It has the same lighting system as the "Lister-Morton" but has the "Loring" wheel of 23 lenses; a simplification resulting in a material lowering of the price.

The third illustration shews the PURVIS STREAK RETINOSCOPE. The outstanding value of this machine is the ease with which an astigmatic axis can be located. It can be supplied complete with its own handle, or alternatively, the head

The
Lister-Morton
Ophthalmoscope

The
Lister-Loring
Ophthalmoscope

The
Purvis Streak
Retinoscope

only can be supplied to be used on the handle of the Lister-Morton Ophthalmoscope.

CATARACT LENTICULAR SOLID BIFOCAL.

The best form lens permits the use of a large reading segment.

The resulting large useful field of view, both for distance and for near, practically overcomes the traditional handicap of the cataract patient.
