

THE NEW CONSOLE LENS CABINET

The illustration shows a Lens Cabinet of new design. When open the lens-tray is held at a convenient angle for easy manipulation of the lenses. As shown there is a convenient ledge provided in front of the lens-tray giving ample space for the accommodation of the patient's record card, etc.

The control panel is fitted with switches for the control and illumination of Test types, Spotlight, etc., and for actuating the transformers inside for Ophthalmoscope, hand Slit-lamp, etc. When closed the cabinet is of pleasing appearance and the lenses are protected from dust.

HAMBLINS FOCIMETER

No. 720

Hamblins Focimeter makes precision measurements of the vertex power, gives the axis and prism of a lens or a combination of lenses and solves the problem of the allowance to be made for the separation of the lenses in the trial frame. It measures the spherical and cylindrical powers to within 0.03 of a diopetre, the axis of the cylinders and direction of the prisms to $1\frac{1}{4}^{\circ}$, and the prismatic power to $\frac{1}{4}$ th of a diopetre. All readings are seen through the eyepiece and are recorded directly by the optical system, and thus are independent of any wear of moving parts. The exact vertex power of a combination of lenses is given, no matter how thick or how far apart are the lenses and irrespective of whether the cylinder is in front or behind the sphere.

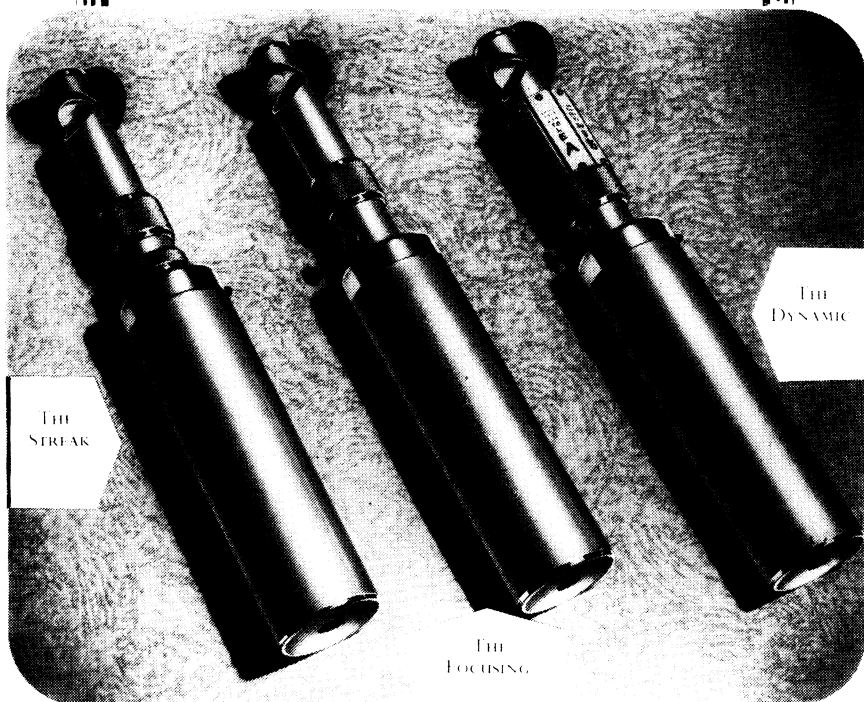

The Surgeon can write his prescription from the recordings of the focimeter confident that the resultant glasses will exactly reproduce the effect of the lenses in the trial frame.

CURRY & PAXTON *RETINOSCOPES*

THE STREAK RETINOSCOPE : Streak rotatable through 180° with axis registering on engraved scale.

THE FOCUSING RETINOSCOPE : The ideal luminous retinoscope. Main column and handle of anodised light alloy. Surface aluminised mirror.

THE DYNAMIC RETINOSCOPE : Enables static and dynamic retinoscopy. Five easily interchangeable fixation charts provide the practitioner with ample time for a thorough test under reading conditions.

Generally provided for use with a 2.5 volt battery, these retinoscopes can be used off A.C. mains via a suitable transformer

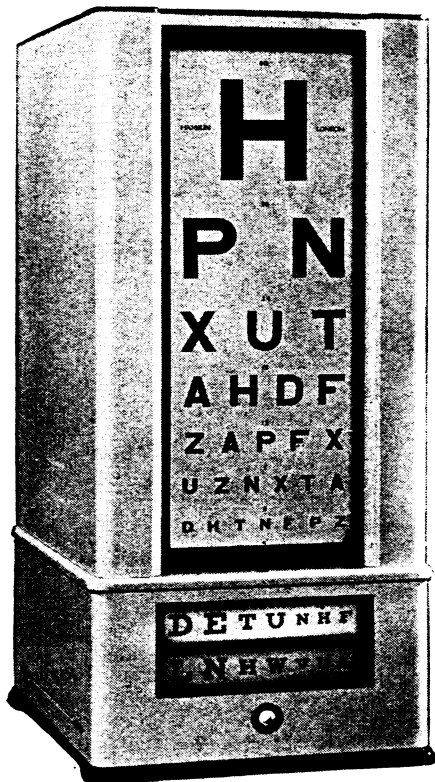

CURRY & PAXTON LTD

Dispensing Opticians

Instrument Dept. : 22 WIGMORE ST. LONDON, W.1

These instruments and a full range of ophthalmic equipment can be seen at THE DUBLIN OPHTHALMOLOGICAL MEETING from 16th to 19th April inclusive on STANDS 7 and 8.

ELECTRIC REVOLVING TEST TYPE AND DUOCHROME TEST

Electrically actuated by merely pressing a button. Suitable for both A.C. and D.C.

Externally illuminated by concealed strip lights with separate illumination for Duochrome Test and Maddox spot.
