

THE LISTER-MORTON OPTHALMOSCOPE  
WITH BATTERY IN HANDLE AND WITH  
ALTERNATIVE HANDLE FOR USE  
WITH MAINS

No. 495  
with battery  
in handle.

No. 0495/9  
with handle for  
use on mains with  
transformer or  
resistance.

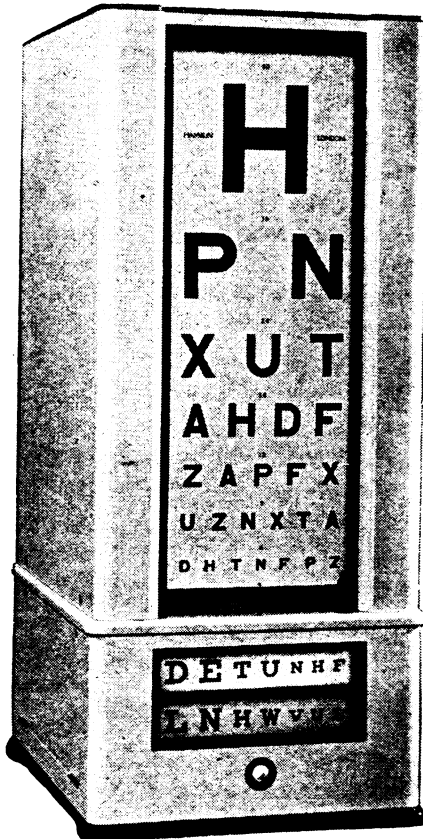

Introduced in 1928 Hamblin's Lister-Morton Ophthalmoscope remains the Standard amongst electric ophthalmoscopes with a performance that has yet to be surpassed. The lighting system has been designed to cut down corneal reflex to a minimum and to eliminate reflections, thus making it possible to carry out a direct examination of the macular region in a fully lighted room without using mydriatics

The battery model being self-contained is ideal for bedside examination, but mains operation is usually preferred in the consulting room.

A good arrangement for a busy Surgeon is to use the battery model for visiting purposes and to have an interchangeable mains handle complete with lamp and condensing system for consulting room purposes.
