

A NEW METHOD OF USING AN  
 AURISCOPE  
 ON  
 THE  
 HANDLE  
 OF  
 A  
 LISTER-  
 MORTON  
 OPHTHALMOSCOPE

The problem of adapting an Auriscope head so that it can be used on the handle of a Lister-Morton Ophthalmoscope has been solved in the manner depicted in the illustration. The Auriscope head is now fitted with a cap similar to that of the Ophthalmoscope, so that the exchange of heads becomes extremely simple; the well known quick "Six Start" thread associated with the Lister-Morton Ophthalmoscope makes the operation a matter of only a couple of seconds.

*Landing on Venus?*

In the year 2004 will occur "The Transit of Venus" when that planet will pass between Sun and Earth for the first time since 1882. Will man, by then perhaps established on the Moon, assay the onward leap? The scientific progress of the last 50 years indicates that the possibility, 49 years hence, is a strong one.

In designing the "Venus" frame Spillers do not claim to have foreshadowed fashions of 2004. It is a fact, however, that this is a frame in which an ultra modern trend is combined with the old fashioned virtues of beauty of form and craftsmanship. This is a two-tone nitrate frame and several colour combinations are available.

*The "Venus"*
