with battery
in handle.

No. 0495/9
with handle for
use on mains with
transformer or
resistance.

THE LISTER-MORTON OPHTHALMOSCOPE

WITH BATTERY IN HANDLE
AND WITH ALTERNA-
TIVE HANDLE FOR USE
WITH MAINS.

Introduced in 1928 Hamblin's Lister-Morton Ophthalmoscope remains the Standard amongst electric ophthalmoscopes with a performance that has yet to be surpassed. The lighting system has been designed to cut down corneal reflex to a minimum and to eliminate reflections, thus making it possible to carry out a direct examination of the macular region in a fully lighted room without using mydriatics.

The battery model being self-contained is ideal for bedside examination, but operation from the mains is usually preferred in the consulting room.

A good arrangement for a busy Surgeon is to use the battery model for visiting purposes and to have an interchangeable mains handle complete with lamp and condensing system for consulting room purposes.

The Best of the Old

Pevensey Castle

The history of Pevensey goes back to pre-Roman times. Originally a Celtic stronghold, then a fortified Roman enclosure, the first castle was Norman, built soon after the invasion. It has seen much of war and sieges but to-day acts as an attraction to Sussex holiday-makers on sunny occasions.

The Best of the New

Bloomed and graduated absorption lenses make these sun glasses ideal for all sunny occasions. They afford maximum protection at the top but have clear glass at the bottom. The frame illustrated is a two-tone combination of imshell and colourless plastic but a wide choice of attractive styles is available.
