SPRING PLACE · LONDON, N.W.5

GULLIVER 3381

LOW VISUAL ACUITY

A NEW TECHNIQUE

Magnifiers have hitherto been prescribed by somewhat empirical methods. With this new technique quantitative measurements speed and simplify accurate prescribing of magnifying aids. Practical application of this technique has shown very encouraging results.

Essentially, the technique entails the use of a projected stimulus to ascertain the size of central scotoma. This is followed by confirmatory tests using reading cards in a new notation laying special emphasis on the region between 6/36 and 1/60. For this assessment a table has been devised that identifies immediately the magnification needed to raise the acuity to a required level.

Complete information on technique & aids available soon

NEW MAGNIFYING AIDS

To verify the prescribed magnification a special time-saving table is used to select from the dozens of magnifiers available the few appropriate to each individual case.

For powers of x8 and above a new series of magnifiers has been produced to overcome the inadequacy of illumination hitherto inevitable.

The Keeler illuminated Hand Magnifier trial set is shown above complete with interchangeable caps varying the magnification according to specific requirement.

Illustrated alongside is the Keeler illuminated Spectacle Magnifier available in powers from x8 to x20. For lower powers a similiar magnifier, non-illuminated, is available.

Clement Clarke Present

THE GOLDMANN SPHERICAL PROJECTION PERIMETER

Meets the most exacting requirements for both black-and-white and colour perimetry. Among the many advantages of the apparatus are: the illumination of the perimeter bowl is entirely independent of the light outside; the contrast between the basic illumination and the brightness of the target is constant; the patient's eye can be observed and controlled through a telescope. By means of a supplementary device, the Spherical Projection Perimeter can also be used for recording central scotomata.

MACKIE SLIT LAMP

The Mackie Slit Lamp was introduced several years ago to meet the genuine need for an instrument capable of affording slit-lamp examination for all diagnostic and clinical purposes at low cost. Many of these instruments are now in use both in private and hospital practice and are without exception giving complete satisfaction. Several eminent surgeons have expressed the opinion that the practical utility of the Mackie Slit-lamp is equal to, or even exceeds, that of the most expensive instruments.

THE LISTER-MORTON OPHTHALMOSCOPE

WITH BATTERY IN HANDLE
AND WITH ALTERNA-
TIVE HANDLE FOR USE
WITH MAINS.

Introduced in 1928 Hamblin's Lister-Morton Ophthalmoscope remains the standard amongst electric ophthalmoscopes with a performance that has yet to be surpassed. The lighting system has been designed to cut down corneal reflex to a minimum and to eliminate reflections, thus making it possible to carry out a direct examination of the macular region in a fully lighted room without using mydriatics.

The battery model being self-contained is ideal for bedside examination, but operation from the mains is usually preferred in the consulting room.

A good arrangement for a busy Surgeon is to use the battery model for visiting purposes and to have an interchangeable mains handle complete with lamp and condensing system for consulting room purposes.

STALLARD OPERATING SPECTACLES

These Operating Spectacles, designed by Mr. H. B. Stallard, F.R.C.S. present the following advantages:—

- (1) When the extension carrying the lenses is swung upwards in front of the forehead, there is no obstruction below or to the sides of the operator's field of view. (2) The lenses, being placed well in front of the operator's nose and the plane of his mask, never become steamed over. (3) The spectacles are very light and comfortable, exerting the minimum of pressure on nose and ears. (4) They can be folded flat into a small space.

R. H. SMYTHE

Veterinary Ophthalmology

Of the greatest interest to all students of comparative ophthalmology, this is the first book on its subject for over 20 years. The author who is Examiner in Surgery to the Royal College of Veterinary Surgeons writes in a succinct and most readable style and has provided 50 drawings and 26 photographs, which are a special feature of the book. It is divided into two sections; the first deals with the anatomy and physiology of the eyes of many animals; the second is clinical and concentrates on the domesticated species.

Price 35s, postage 1s. 9d.

ALAN A. WOODS

Endogenous Uveitis

A meticulously organized, beautifully written and magnificently illustrated work by the Professor Emeritus of Ophthalmology of The Johns Hopkins University School of Medicine. There are 42 full-colour plates and 81 drawings and no important detail is omitted from a text that reflects all the most recent advances in the knowledge of uveitis. The material is presented for the student of ophthalmology rather than for the already trained specialist and, to this end, stress is placed on fundamentals, such as the classification, the pathogenesis, the basic pathology and the symptomatology of uveitis. A detailed index makes it an ideal book of reference for the practitioner.

Price £5, postage 2s.

“ Featherweight ”

A fine example of British Craftsmanship

Designed for sheer comfort and especially for the ultra-sensitive patient, the “FEATHERWEIGHT” has been constructed to obtain exceptional lightness in weight, conjointly with a modern design.

The framework is made from Turtle-shell which gives this apparently delicate appliance strength and rigidity.

It is produced in our own workshops to carefully recorded individual facial measurements.

NOTE:—Total weight with moderate Rx. Fitted with Plastic Igard lenses 3 drms. 10 grms. or under $\frac{1}{2}$ oz. Fitted with crown glass lenses 4 drms. 40 grams. or just over $\frac{1}{2}$ oz.

PLASTIC ARTIFICIAL EYES

PLASTIC LINED LEAD SHELLS

1. AESTHETIC PROSTHESES

As an adjunct to surgical practice we offer to Surgeons our modern service of plastic prosthetics, either as an interim measure during surgical correction, or for permanent rehabilitation in the cases where plastic surgical procedure is contra-indicated. In conjunction with our plastic artificial eye service some remarkable results have been obtained, as the illustrations on the opposite page clearly demonstrate. Appointed official contractors to Ministry of Pensions.

2. ARTIFICIAL EYES

Complete range and accessories supplied. Eyes fitted to all types of buried and semi-buried implants. Plastic Artificial Eyes specially made to an impression of the socket can be successfully fitted in the case of injury or surgical intervention. The irides are faithfully reproduced by hand pigmenting the stroma pattern and colours on a series of acrylic discs, superimposed to simulate the life and depth of the natural iris. Excellent results are obtained in fitted shell eyes to shrunken and deformed globes.

3. PLASTIC-LINED LEAD SHELLS

For protection to the eye in Radiotherapy.

These lead shells are lined with Perspex and are in the form of a contact lens. It is even possible by drilling a small hole in the shell to carry out localised treatment of a lesion on the sclerotic while at the same time fully protecting the cornea and other parts of the sclerotic from the harmful effects of radiations.

ENGLISH EDITION OF
SJÖGREN'S VISUAL ACUITY
TEST CARDS FOR CHILDREN
(WASHABLE)

This well-known Test devised by Dr. Sjögren of Sweden has been redrawn so that the "hands" subtend the Snellen angle of one minute of arc at SIX METRES instead of five. This edition is of six cards (6/36 to 6/6) with WASHABLE SURFACES, almost a necessity for anything being constantly handled.

"HORSE" TYPE
(Snellen)

The first two children's types on this page also conform to the Snellen principle, the funnels of the ships and the legs of the horses subtending the one minute angle at the specified distance. The third type comprises pictorial representation of animals and objects that appeal to children, giving only an approximation of the Snellen distances. It is designed so that by covering half the type perpendicularly a choice of two different arrangements is presented.

Salary: £1650 × 50 – £1800, plus C.O.L.A., plus prescribed travelling and subsistence allowances.

The successful applicant will be required personally to render professional service in connection with the Bureau's Ophthalmic Field Services.

Applications, which will close on 30th November, 1956, must be submitted on a prescribed form which, together with details of the duties and general conditions of service attaching to the post, can be obtained from: The South African National Council for the Blind, P.O. Box 1343, Pretoria.

The advertisement features a collection of B&O lens boxes and labels. At the top left, a label shows '+1.0 +0.50'. Below it is a box for 'Isophane' lenses, labeled 'WIDE ANGLE LENS' with 'Spherical' and '+1.50' markings. Another label shows '+3.50 3.1'. In the center is a box for 'WATFORD' lenses, labeled 'FUSED' and '+0.50 6.00 Base 3mm.'. To the right, another 'WATFORD' box is visible. The B&O logo is prominently displayed in the upper right.

HAMBLIN'S PORTABLE EYE MAGNET

Hitherto, high power in a magnet has been possible only at the expense of mobility. This highly-efficient electro-magnet, though small in dimensions and light in weight, is capable of exerting a tractive force comparable with well-known giant types. Its shape and balance make possible a very precise approach to the foreign body and enable the operator to make the maximum use of the very high power developed.

The length (without applicator) is $5\frac{1}{2}$ inches, the maximum diameter 4 inches and the weight 6 lbs; the loading is 500 watts.

With such a loading in a magnet of these dimensions, considerable heat is generated. This is reduced to a minimum by the employment of a fin radiator.

Operating-theatre regulations require flame-proof switchgear to be used with this type of apparatus.

Where Alternating Current only is available, a rectifier is necessary. This can be supplied with suitable footswitch.

For Direct Current a control board with footswitch is also available.

First hints of Autumn

Our ninth month was the seventh in the old Roman calendar: hence its name, from Septimus, which outlived a number of efforts to change it. In spite of Quarter Day and the first hint of autumn in the air, September is a wonderful month not the least of its joys being the re-appreciation of fireside reading.

The Spiller selected Demi-Blonde Tortoiseshell Library frame, fitted with gold joints, is handmade in our London workshops. This is the frame for the connoisseur who requires spectacles which combine strength, beauty and comfort in wearing. This is the frame for fireside reading in the long winter evenings ahead.
