# The RODENSTOCK VERTEX REFRACTIONOMETER (FOCIMETER)

A superb precision instrument facilitating easy, speedy, and accurate measurement of all ophthalmic lenses and prisms and glazed spectacles. Back vertex powers from  $+25.00$  to  $-25.00$  dioptres can be determined within a tolerance of  $\pm 0.10D$ , and prism powers up to  $6\Delta$ . All readings (dioptric power, cylinder axis, prism power, base-apex direction) can be made simultaneously with the focusing and in the visual field of the eyepiece. The cylinder power of an astigmatic lens is instantly measured by a single simple setting after the first principal meridian has been determined. Built-in axis marking device is standard on every instrument. Well-designed steady support for spectacle frames. Large base plate provides a firm foundation when the instrument is tilted to any inclination from vertical to horizontal. Each instrument is finished in cream enamel and supplied with a plastic dust cover.

A thing of beauty and a joy to handle.

# THE KLEIN KERATOSCOPE

This self-luminous instrument provides a brilliant and clearly-defined reflected image from the cornea. It covers approximately the same area as the Placido Disk, yet it is far smaller and has the great advantage of being independent of external illumination. The entire cornea can be traversed by directing the patient to move his gaze along any required meridian. Because of its small convenient size, its inexpensiveness and simplicity in use, the Keratoscope can be used as part of the practitioner's everyday routine; and the interpretation of the corneal pattern will be found to increase in significance as experience is gained.

The Keratoscope is invaluable for

- ★ Post-operative examination of corneal grafts.
- ★ Ready detection of corneal scars and ulcers.
- ★ Confirmation of corneal astigmatism and assessment of its axis.
- ★ Demonstration of lenticular astigmatism by showing that an astigmatic eye has normal corneal configuration.

The KLEIN KERATOSCOPE HEAD fits any Keeler "NEW ERA" Battery or Cord Handle.

## 'CORTISPORIN'

*kills bacteria,  
reduces  
inflammation.*

This ointment contains bacitracin, neomycin, polymyxin B, and hydrocortisone. It has a wider range of activity than any single antibiotic, destroying gram-positive and gram-negative organisms, including *Ps. pyocyanea*, *proteus* and staphylococci. Bacterial resistance or sensitisation of patients are unlikely with 'Cortisporin'. Furthermore, by virtue of its hydrocortisone, 'Cortisporin' reduces inflammation.

## 'Cortisporin' BRAND OINTMENT

Issued in collapsible tubes  
of 10 gm. with nozzle.

# **Terra-Cortril\***

brand of oxytetracycline hydrochloride and hydrocortisone

Terra-Cortril ophthalmic suspension is of outstanding value in two groups of eye conditions: where an inflammatory process is complicated by infection or the risk of infection, and where treatment of infection is hindered by the presence of excessive inflammation.

## **Control of Inflammation**

The hydrocortisone in Terra-Cortril Ophthalmic Suspension quickly reduces inflammation, relieving symptoms and reducing the risk of permanent damage from scarring.

## **Control of Infection**

Terra-Cortril Ophthalmic Suspension also contains Terramycin.\* This potent and unusually well tolerated antibiotic rapidly controls infection, and will prevent the emergence of infection during treatment of a simple inflammatory reaction.

In each ml. of controlled-viscosity gel-like base Terra-Cortril Ophthalmic Suspension contains 15 mg. hydrocortisone acetate 5 mg. oxytetracycline hydrochloride and 10,000 units Spolymyxin B. Sulphate. The suspension is available in 10 ml. amber bottles. An eye-dropper is provided.

## DISPENSING OPTICIANS

A. H. ODELL, *Managing Director.*  
M. ODELL, *Secretary.*

*Members of the Guild of  
British Dispensing Opticians*

Makers of spectacles of a fine precision and of a standard worthy of the best work of British craftsmen—a very important but fast dwindling section of the optical industry.

Frames are made and mounted to the individual measurements of each patient and both frame and lenses periodically checked during the course of production.

The finished spectacles are finally checked by a qualified dispensing optician and whenever possible, personally fitted on every patient.

## *Hearing Spectacles*

Truly accurate dispensing can now be achieved in this field. Hamblin Hearing Spectacles overcome the difficulties often experienced with such devices by a design which dissociates the acoustic and optical aspects of the problem.

A miniature transistor hearing aid produced by specialist manufacturers, is incorporated in a Hamblin hand-made spectacle frame. Thus, the requirements of both ophthalmologist and aurist may be independently met.

# HAMBLIN

OPTICIANS BY APPOINTMENT

THE  
**HAMBLIN**  
(LISTER-MORTON)  
**OPHTHALMOSCOPE**

Introduced in 1928 the Hamblin Lister-Morton Ophthalmoscope remains the Standard amongst electrical ophthalmoscopes with a performance that has yet to be surpassed. The lighting system has been designed to cut down corneal reflex to a minimum and to eliminate reflections, thus making it possible to carry out a direct examination of the macular region in a fully lighted room without using mydriatics.

The battery model, as illustrated, being self-contained is ideal for bedside examination, but operation from the mains is usually preferred in the consulting room. A good arrangement for a busy Surgeon is to use the battery model for visiting purposes and to have an interchangeable mains handle complete with lamp and condensing system for consulting room use.

## IMPORTANT NOTICE

### OPHTHALMOSCOPE BATTERIES

Manufacturers of the dry cells used in Hamblin Ophthalmoscopes have recently altered their design. The new style may short-circuit against the stop-ring in the upper end of the earlier type Lister-Morton handles.

To remedy this, the diameter of the hole in the stop-ring on all Hamblin Ophthalmoscopes now being manufactured has been slightly increased.

**When existing ophthalmoscopes are received for routine overhaul, the stop-ring will accordingly be altered without extra charge.**

*"A work which will be found to be indispensable to all practising ophthalmologists and sheds lustre on British ophthalmology."*—BRITISH JOURNAL OF OPHTHALMOLOGY.

*"A beautiful book, well written, exquisitely illustrated. This book is a classic. A copy should be owned by every ophthalmologist. Though primarily for a reference, it makes exceedingly interesting reading from cover to cover."*—AMERICAN JOURNAL OF OPHTHALMOLOGY.

## MAN about TOWN

Our model is not wearing spectacles. If it were necessary he would undoubtedly be attracted by a Spiller frame made to suit his appearance, his purse and his pursuits. Such a frame might be the Spiller Library Supra which has exceptional strength combined with modern elegance of line. It also gives a wide field of vision and is obtainable in real tortoiseshell and a wide range of coloured plastics.

The Spiller Library Supra
