A blunt-sharp Taylor knife

A. HAGEDOORN

Amsterdam

In "ab externo" incisions of the limbus, damage to the (protruding) iris should be prevented. The modification to the tip of the Taylor knife illustrated here contributes to the safety of the operation and may be of interest to those surgeons who are accustomed to using this instrument.

Received for publication December 22, 1969

Address for reprints: Academisch Ziekenhuis der Vrije Universiteit, De Boelelaan 1117, Amsterdam 11, The Netherlands

This modified knife was made by instrument-maker Charles G. van den Bosch
