

MAXIDEX

The intensive care steroid for severe ocular inflammations

Maxidex dexamethasone—0.1%: a potent ophthalmic steroid: the Isopto vehicle to give increased absorption and maximum delivery of the anti-inflammatory agent to the affected area.

MAXIDEX—especially useful in such conditions as iritis, acute and chronic anterior uveitis, cyclitis, thermal and chemical burns, and also post-operatively to reduce inflammatory reactions.

One or two drops of Maxidex, prescribed in accordance with the severity of the condition, will soothe and ease the pain and discomfort of most acute inflammatory eye conditions.

Contraindicated in acute herpes simplex, vaccinia, varicella and most other viral diseases of the cornea and conjunctiva, tuberculosis, fungal disease, acute purulent untreated infections, which like other diseases caused by micro organisms, may be masked or enhanced by the steroid.

Ganda®

**The new effective
non-miotic therapy for
open angle glaucoma**

As a combination of
guanethidine sulphate
and adrenaline in a
single bottle, Ganda
constitutes a complete
therapy.

The potentiation of
adrenaline by
guanethidine forms the
rational basis for this
combination. The three
formulations offer the
clinician flexibility in
treatment, and the twice
daily dosage contributes
to patient acceptability.
