

# Surgery Microscope 310

An outstanding surgery microscope - especially designed for the needs of modern eye surgery, offering full foot controlled operation, excellent optical performance and a range of accessories.

These are the salient features.

- Vertical central illuminator holding two fully rotatable (360°) surgery microscopes for surgeon and assistant.
- Inclined illumination and slit illumination also possible. The danger of covering the light path is excluded in all illumination modes.
- Five step magnification change from 4x to 40x with constant brightness at any magnification and exactly same field of view for assistant.
- Fully foot switch controlled motor driven microscope.
- 6V/20W or 12V/50W halogen lamp illumination.
- Accessories such as automatic driven camera, TV-adaptor, third observer tube.

# MAXIDEX

## The intensive care steroid for severe ocular inflammations

Maxidex dexamethasone—0.1%: a potent ophthalmic steroid: the Isopto vehicle to give increased absorption and maximum delivery of the anti-inflammatory agent to the affected area.

MAXIDEX—especially useful in such conditions as iritis, acute and chronic anterior uveitis, cyclitis, thermal and chemical burns, and also post-operatively to reduce inflammatory reactions.

One or two drops of Maxidex, prescribed in accordance with the severity of the condition, will soothe and ease the pain and discomfort of most acute inflammatory eye conditions.

Contraindicated in acute herpes simplex, vaccinia, varicella and most other viral diseases of the cornea and conjunctiva, tuberculosis, fungal disease, acute purulent untreated infections, which like other diseases caused by micro organisms, may be masked or enhanced by the steroid.
