

Don't let your treatment
slip down the drain

After topical instillation, some
of the solution is lost down
the naso lacrimal duct.
Adding a viscolising agent
will slow this process.

HUMPHREY FIELD ANALYZER

The modern standard of Perimetry.

The Humphrey Field Analyzer is an automated, computerised projection perimeter. It has all the standards of the traditional Goldmann and offers a wide variety of screening test patterns and sophisticated threshold-related strategies which enable you to identify the most subtle defects. It also provides you with quantitative data analysis to highlight areas of significance and allow you to easily monitor pathologies.

There are four models of Humphrey Field Analyzer, each designed to suit your particular requirements, whether it be a pure screening facility or a complete patient record and statistical analysis. All software is upgradeable, so you can increase the level of sophistication you require as you require it.
