

SCREENING?

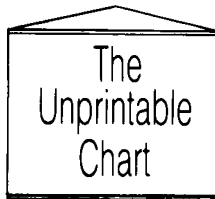

Three valuable, proven and inexpensive instruments for screening and quantitative analysis

FRIEDMANN 2 visual field analyser. No other instrument offers the comprehensive facilities of the Friedmann 2 for the price.

- ★ white stimuli
- ★ colour perimetry
- ★ 98 stimuli in central 25°
- ★ proven and documented performance
- ★ electronically controlled stimuli

PERKINS MK2 hand-held applanation tonometer. The world's most accurate hand held tonometer. Operates on the standard Goldmann principle against which all other types of tonometer are measured. Comes in carrying case with spares and certificate of accuracy.

PELLI-ROBSON contrast sensitivity chart. The "unprintable chart". Such is the accuracy and fine tolerances demanded by this test that it is impossible to print here. The test uses letters of reducing contrast, but the same size, to quantify contrast sensitivity. Easy and quick to use.
