Diagnosis of external ocular infections: microbiological processing and interpretation

EDITOR,—I read with interest the recently published article by Pinna et al.,1 and compliment the authors for bringing to light the important issue of external ocular infections associated with coagulase negative staphylococci (CoNS). Ocular microbiologists rarely pay attention to the speciation of this group of bacteria and various species involved in ocular infections are generally passed off as Staphylococcus species or CoNS. However, the group of staphylococci needs special attention with respect to their role in pathogenicity. Generally, S epidermidis and other CoNS along with corynebacteria and propionibacteria are normal commensals of the conjunctival sac and lids; therefore samples from the external ocular surface resulting in a light growth on primary solid culture medium like blood agar or from a thioglycolate broth, are more likely to be contaminated with the mentioned flora.2 In our laboratory and many others across the world, a bacterial isolate (more so a known commensal organism) from corneal scrapings or conjunctival/lid swabs is considered significant if it is consistent with the clinical signs and fulfills any one of the following criteria: (1) results of direct smear of the sample are consistent with culture; (2) the same organism is grown in more than one medium; or (3) the same organism is grown from repeated specimens. However, Pinna et al., in their article, have not indicated adherence to any such criteria while selecting isolates for their study, though they have acknowledged the isolation of this group of staphylococci needs special attention with respect to their role in pathogenicity.

Replay

EDITOR,—We thank Dr Sharma for her interest in our article on the identification and antibiotic susceptibility of coagulase negative staphylococci (CoNS) isolated in corneal/external infections. Apart from being a common component of the normal ocular flora, CoNS may occasionally be important ocular pathogens and cause chronic blepharitis, acute conjunctivitis, and suppurative keratitis.

As stated by Dr Sharma, a bacterial isolate from corneal scrapings or conjunctival/lid swabs is generally considered significant whenever there is (1) growth in one medium with consistent direct microscopic findings, or (2) growth of the same organism on two or more media, or (3) the same organism is grown from repeated specimens. However, when a bacterial isolate is consistent with the clinical signs, isolation of the organism even from a single medium can be considered significant. In our study, corneal scrapings for Gram stain were performed only on the patients with suppurrative keratitis. In all cases the Gram stain showed the presence of grape-like clusters of Gram positive cocci. Follow up cultures performed about 12 hours after the last dose of medication showed eradication of the infecting organism in all 45 patients.

Laser pointers can cause permanent retinal injury if used inappropriately

EDITOR,—The authors previously published a brief report in a widely circulated ophthalmic review periodical (Eye News) on the potential risk of permanent injury from the inappropriate use of laser pens.1 The article had been prompted by two events—firstly, a flood of reported cases in the popular media of the “blinding” effects of laser pointers on drivers, soccer goalkeepers, and members of the general public, and, secondly, the referral to our department for clinical assessment of police and fire service personnel who had been exposed to laser pen light. Examination of the clinical cases demonstrated no permanent injury. We were also asked to review data determined for a number of laser pens that had been subjected to analysis by Edinburgh Environmental and Consumer Services Department. Many of these laser pens were mislabelled, either by exhibiting American standard classification (different from European), or simply by being inaccurately classified. Subsequently, a number of laser pens have been sent to us for examination, pending police investigations. Many of these laser pens are class 3B devices according to the European laser classification, and are therefore considered potentially hazardous. Nonetheless, we conclude that the normal blink and aversion response would prevent retinal damage from transient exposure. However, it had also been brought to our attention that the cost of these laser pens, and laser keyrings, was such that they were being

Reply

Eorton, – In writing this article I addressed five issues. Firstly, to counteract media “hype” on the “blinding potential” of laser pointers by explaining the biophysical principles involved in beam tissue interactions and, as a consequence, the risks associated with such devices. Secondly, I wished to address a degree of confusion generated by a misleadingly titled, well circulated, but non-peer reviewed article. Thirdly, I wished to give guidance to casualty and medical personnel first confronted with individuals who had experienced exposure to laser pointers. Fourthly, I thought it helpful to explain the differences between countries concerning the housing of the world’s major producers and major market and the European Union. Finally, I wanted to highlight the fact that, although the derived safety criteria and system classifications varied between countries, all the classifications were dependent on a common database.

McGhee et al. focused the issue of classification and potential risk in their periodical article and presented their conclusion in their current letter. A laser pointer that goes from a 3A classification in the United States does not suddenly become more hazardous by traveling across the Atlantic. Although it moves into a 3B classification within the European Union, it is still the same laser and still has the same risk profile as it had in the United States as a 3A system.

Almost all of the UK database for retinal damage that is incorporated in the various codes of practice was derived through collaborations between my laboratory and the then Institute of Aviation Medicine, Farnborough.

A recent article by Luttrull and Hallisey is therefore of significant importance to any ophthalmologist dealing with clinical cases relating to laser pen exposure. In this reported case, a 34-year-old Hispanic male, aged 20, was reviewed 2 days after deliberately staring into the beam of a class 3A (USA) laser pointer, held 8–10 inches from the eye, for 30–60 seconds. The laser device in question had a maximum power rating of 5 mW at a wavelength of 670 nm. Although the subject maintained 20/20 vision with a normal Amsler chart, he exhibited a focal disturbance of the retinal pigment epithelium in the left nasal macula demonstrating loss of his central scotoma. This right eye of this 34-year-old was entirely normal despite resolution of his central scotoma. The left eye of this 34 year old was entirely healthy on intravenous fluorescein angiography, but the left eye demonstrated a window defect on angiography is also apperent, not a window defect. Finally, the authors discuss the possibility that this individual may have been at high risk as a result of no ED50 data for many common lasers.
Residents’ Foreign Exchange Programme

Any resident interested in spending a period of up to one month in departments of ophthalmology in the Netherlands, Finland, Ireland, Germany, Denmark, France, Austria, or Portugal should apply to: Mr. Robert Achen, Secretary of the Foreign Exchange Committee, European Board of Ophthalmology, Institute of Ophthalmology, University College Dublin, 60 Eccles Street, Dublin 7, Ireland.

16th Congress of the International Society for Geographical and Epidemiological Ophthalmology (ISGEO)

The 16th Congress of the ISGEO will be held at the Institut D’Ophthalmologie Tropicale De L’Afrique (IOTA) in Bamako, Mali on 21–22 February 2000. Further details: Dr. Paul Courtright, ISGEO Secretary, BC Centre for Environmental & International Ophthalmology, University of British Columbia, St Paul’s Hospital, 1081 Burrard Street, Vancouver, BC V6Z 1Y6, Canada (email: pcourtright@spaulshosp.bc.ca; website: www.interchange.ubc.ca/bceu/isgeo).

Office of Continuing Medical Education

The Baylor College of Medicine, Cullen Eye Institute, Department of Ophthalmology is presenting a course entitled “The Cullen course 2000—clinical advances in ophthalmology for the practising ophthalmologist” at the Houstonian Hotel and Conference Center, 111 North Post Oak Road, Houston, Texas from 3–5 March 2000. Further details: Carol J Soroka, Conference Coordinator, Office of Continuing Medical Education, Baylor College of Medicine, One Baylor Plaza-S104, Houston, TX 77030, USA. (Tel: 713 798-5600.)

Leonhard Klein Foundation

The Leonhard Klein Foundation in the Donors’ Association for the Promotion of Sciences and Humanities in Germany is to bestow the Leonhard Klein Award 2000 of DM 30 000 for innovative work in the development and application of microsurgical instruments and microsurgical operating techniques. Deadline for applications is 31 March 2000. Further details: Stifterverband fur die Deutsche Wissenschaft e V, Herrn Peter Beck, Postfach 16 44 60, D-45224 Essen, Germany.

American Institute of Ultrasound in Medicine

The American Institute of Ultrasound in Medicine will hold the 44th annual conven- tion in San Francisco, California on 2–5 April 2000. Further details: AIUM Professional Development Department, 14750 Sweitzer Lane, Suite 100, Laurel, MD 20707-5906 (tel: 800-638-5353; fax: 301-498-4100; email: comp_edu@aium.org; website: www.aium.org).

XXII Tuebingen Detachment Course

The XXII Tuebingen Detachment Course, retinal and vitreous surgery, will be held in the congress centre Incheba, Bratislava, Slovak Republic 6–7 April 2000 preceding the congress on retinal detachment of the Slovak Ophthalmological Society 8–9 April 2000. Further details: Professor Peter Strmen 81569 Bratislava, Mickiewiczova 13 (tel/fax: 00421-7-52964641; email: strmen@fanesa.sk).

VIIth Mediterranean Ophthalmological Society

The combined meeting of the VIIth Mediterranean Ophthalmological Society and the VIIth Michaelson Symposium on Ocular Circulation and Neovascularisation will be held in Jerusalem on 21–26 May 2000. Further details: Secretariat, c/o Unitors Israel Ltd, PO Box 3190, 61031 Tel Aviv, Israel (tel: +972-3-5290999; fax: +972-3-5290999; email: meetings@unitors.co.il).

The VIIth Michaelson medal and award will be delivered on 24 May 2000 in Jerusalem. The medal and award ($15 000 monetary prize) are sponsored by the Israel Academy of Sciences and Humanities and by the Hadassah Hebrew University Hospital and Medical School of Jerusalem, Israel. Nominations are sought from the ophthalmic community at large. Suggestions and reasons for choice and CV highlights should be sent to Professor David BenEzra, Secretary for the International Nominating Committee, Pediatric Ophthalmology Unit, Hadassah Hebrew University Hospital, PO Box 12000, Jerusalem 91120, Israel.

5th International Vitreoretinal Meeting—IVV 2000

The 5th International Vitreoretinal Meeting—IVV 2000 will be held in Parma, Italy, on 26–27 May 2000. The main topics will include “Hypotony and glaucoma in vitreoretinal surgery”, “Internal limiting membrane surgery”, “Macula oedema, “Open globe injuries”, and “News in retinal pigment epithelium”. Further details: C Cantu, MA De Giovanni, or S Tedesco, Scientific Secretary, Institute of Ophthalmology, University of Parma, Via Gramsci 14, 43100 Parma, Italy (tel: +39 0521 259106; fax: +39 0521 292358; email: nuzz@ipruniv.rrc.unipr.it).

International Strabismological Association

The International Strabismological Association (ISA) has established fellowships for training in strabismus and paediatric ophthalmology, supported by $US 10 000 each. Further details: Secretary/Treasurer ISA, Derek T Sprunger, MD, Indiana University School of Medicine, 205 Bascom Hall, 525 Barnhill Drive, Bloomington, Indiana 47405, USA (tel: 812-855-1804; fax: 812-855-8609; email: dsprunger@indiana.edu).

Ophthalmologists 2000

The Joachim Kuhlmann AIDS Foundation, Essen, Germany, is sponsoring two fellowships per year for ophthalmologists at a well known institute, who want to train in CMV retinitis and other HIV related ophthalmological diseases. The fellowships are valued at $US5000 each. Deadline for application is 31 May. Detailed applications, including CV and publication list, should be sent to the Joachim Kuhlmann AIDS Foundation, Bismarkstrasse 55, 45128 Essen, Germany (tel: 0201 87910-87; fax: 0201 87910-99; email: jkstiftung@t-online.de).

DR-2000, International Forum on Diabetic Retinopathy

The International Forum on Diabetic Retinopathy will take place on 7–9 September 2000 at the Palazzo Reale, Naples, Italy. Further details: Francesco Bandello, Congress Secretary, MGR Congressi, Via Sforza Tullio 4, 20123 Milano, Italy (tel: 39 02 4300711; fax: 39 02 48008471; email: dr2000@mgr.it).

13th Afro-Asian Congress of Ophthalmology

The 12th Afro-Asian Congress of Ophthalmology (Official Congress for the Afro-Asian Council of Ophthalmology) will be held on 11–15 November 2000 in Guangzhou (Canton), China. The theme is “Advances of ophthal- mology and the 21st century”. Further details: Professor Lezheng Wu, Zhongshan Eye Center, SUMS, New Building, Room 919, 54 Xianlie Nan Road, Guangzhou 510060, PR China (tel: +86-20-8760 2402; fax: +86-20-8777 3370; email: lwuicv@gzsums.edu.cn).

Singapore National Eye Centre 10th Anniversary International Congress

The Singapore National Eye Centre 10th Anniversary International Congress will be held in conjunction with 3rd World Eye Surgeons Society International Meeting on 2–4 December 2000 at the Shangri-La Hotel, Singapore. Further details: The Organising Secretariat, 11 Third Hospital Avenue, Singapore 168751 (tel: (65) 2277255; fax: (65) 2277290; internet: www.sneec.com.sg).

The Hong Kong Ophthalmological Symposium 00

The Hong Kong Ophthalmological Symposi- um 00 will be held 4–5 December 2000, in Hong Kong, China. Further information: Miss Vicki Wong, Room 802, 8/F Hong Kong Academy of Medicine, 99 Wong Chuk Hang Road, Aberdeen, Hong Kong (tel: (852) 2761 9128; fax: (852) 2715 0089; email: cohk@netvigator.com).
