

Additional Table 1. Summary of the indications for retreatment.

	ICGA	FA	OCT	Treatment
Polypoidal component of PCV lesions	+	+	+/-	ICG-guided combination therapy
	-	+	+/-	FA-guided combination therapy
	+	-	+/-	ICG-guided combination therapy
	-	-	+	Ranibizumab only, no treatment if OCT criteria were -
Vascular network component of PCV lesions (when polyps were -)	+	+	+/-	FA-guided combination therapy
	-	+	+/-	FA-guided combination therapy
	+	-	+	Ranibizumab only, no treatment if OCT criteria were -
	-	-	+	Ranibizumab only, no treatment if OCT criteria were -

ICGA = an area of polypoidal component or vascular network component demonstrated by indocyanine green angiography; FA = an area of leakage demonstrated by fluorescein angiography; OCT = a presence of intraretinal or subretinal fluid by optical coherent tomography or an increase of central retinal thickness (CRT) by optical coherent tomography for 100 µm or more compared to the lowest previous CRT value.
