Supplementary Figure 3. The refraction distribution, refraction progression, and best-corrected visual acuity distribution of patients with pathogenic ARR3 variants. (A) The scatter plot shows the spherical equivalent dioptr distribution of 62 patients with available refraction data. (B) The line chart shows the refraction progression of eight follow-up patients. (C) The scatter diagram shows the cylinder dioptr distribution of patients with ARR3-associated MYP26. (D) The scatter plot shows the best-corrected visual acuity distribution of 57 patients with available data.
